

PRE-FLIGHT CHECKLIST

By the morning of the workshop, you should have...

- A Copilot Studio developer environment (Power Platform dev environment with a Dataverse database) — verified by successfully creating a test agent
- A Business Central online sandbox in the **same tenant** as your developer environment
- Your laptop, charger (Euro-compatible if traveling), internet, and a smile

CARDINAL RULE

Your Business Central sandbox **MUST be in the same tenant** as your Copilot Studio developer environment. If they're in different tenants, the workshop exercises won't work end-to-end.

1 What to Bring

To ensure you have the best experience, please bring the following:

- Your laptop (and don't forget a Euro-compatible charger)
- Internet connectivity
- Comfortable attire, comfortable shoes, and, of course, a smile!

2 Create a Copilot Studio Developer Environment

A Power Platform developer environment with a Dataverse database. Pick the option that matches your setup.

IMPORTANT — Do **not** use a production environment of Power Platform for this workshop unless you own the tenant and know what you are doing. What you create can impact your live business data.

OPTION 1 Working with an M365 Global Admin (or if you are one yourself)

- Go to admin.powerplatform.com and sign in with your M365 (Entra ID) credentials
- Manage → Environments → create a new environment. Step-by-step video walkthrough: youtube.com/watch?v=J0Catwqp3n8

PAY SPECIAL ATTENTION TO THESE SETTINGS

Region	United States — Default <i>Important: matches the features used in workshop exercises</i>
Get new features early	No
Type	Developer
Create on behalf	Yes <i>(if someone other than you is creating this for your account)</i>
Add a Dataverse data store	Yes (cannot be disabled)
Language	English (United States) <i>Some preview features are English-only; this is on the second screen after Next</i>
Security Group	Ask your admin to assign one. If none is available, select None
Deploy Sample apps and data	No

Verify your environment works

- Once Ready, go to copilotstudio.microsoft.com and switch to your new environment using the environment switcher (top-right)
- You may be prompted to sign in again, or to sign up for a Copilot Studio Trial (a credit card may be required)
- **Prerequisite:** a Microsoft 365 tenant. You *cannot* access Copilot Studio with a Hotmail / Gmail / Outlook.com address
- Try creating a new agent — click the big **Create Agent** button

IF "CREATE AGENT" FAILS

- In Power Platform Admin Center → Manage → **Tenant settings**, add the **Copilot Studio Author** permission to a Security Group your user belongs to (create one if needed)
- Also enable **Publish bots with AI features** in Tenant settings

OPTION 2 Are you a Microsoft Partner with CDX access?

Note: in 2026, this is a changing landscape and the steps may differ.

- Go to cdx.transform.microsoft.com/home and sign in with your partner credentials
- Recommended: create a CDX environment **with Business Central included** — saves you steps later
- Once your CDX environment is ready, return to **Option 1** above and follow those steps

3 Create a Business Central Online Sandbox

IMPORTANT — Do **not** use a production environment of Business Central for this workshop unless you own the tenant and know what you are doing. What you create can impact your live business data.

Reminder: this BC sandbox **must be in the same tenant** as your Copilot Studio developer environment.

1. **Sign in to the Microsoft 365 Admin Center** at admin.microsoft.com with your admin credentials.
2. **Open the Business Central Admin Center** at businesscentral.dynamics.com/admin — this opens the BC Admin Center for your tenant.
3. **Create a new environment.** In the left menu, click **Environments** → click **+ New** at the top, then fill in:
 - **Name:** a name for your sandbox (e.g., [TestSandbox1](#))
 - **Type:** **Sandbox**
 - **Country/Region:** recommended **United States**
 - **Version:** the latest available
4. **Confirm and create.** Click **Create**. Provisioning takes a few minutes.
5. **Access the sandbox.** Go to businesscentral.dynamics.com and use the environment selector (top-right) to switch to your new sandbox.

You're ready! See you at the workshop. 🚀

If you hit a snag during prep, reach out ahead of time at info@onlycopilotfans.com — it's much easier to sort issues before the workshop than during it. We'd rather you spend the day building agents than wrestling with provisioning.
